

THE MASTER UNIVERSE DIAGRAMS HANDBOOK

MASTER CONCEPTS

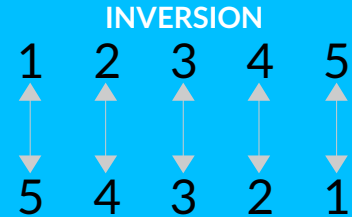

Here are a few of the main concepts that are observable in the design of the Master Universe.

4:1 RATIO: This ratio is best seen as 1 superuniverse zone to 4 outer space zones. It is fundamental to the overall design of the Master Universe.

This ratio is also seen in many aspects of nature and daily living.

These fundamental concepts are observed within the Grand Universe.

MASTER CONCEPTS

THE GROWTH AND HEALING PROCESSES

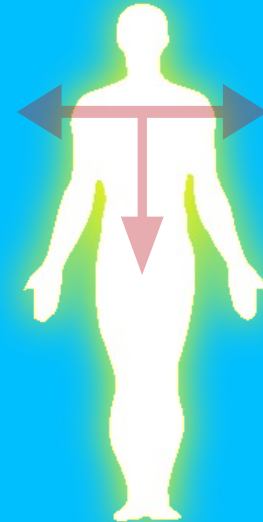

All cure starts inside the body and proceeds outward, working from the head and moving downward, and proceeds in the reverse order that the symptoms originally appeared in the body.

That basic immutable principle of nature is also known as **remotion** and is an integral part of the development and completion of the Master Universe. Growth, and when necessary the healing of the Master Universe, especially where it concerns the 4 outer space zones relies significantly on this process.

Spiritual growth occurs from the head downward. Material growth occurs from the center outward. Healing follows the reversal process — in the reverse order that the degeneration first appeared.

MAN EMBODIES THESE CONCEPTS (in God's image)

From the head (God) moving downward (to the lowest creatures).
From the inside (Paradise) moving outward to the extremities (superuniverses and outer space zones).

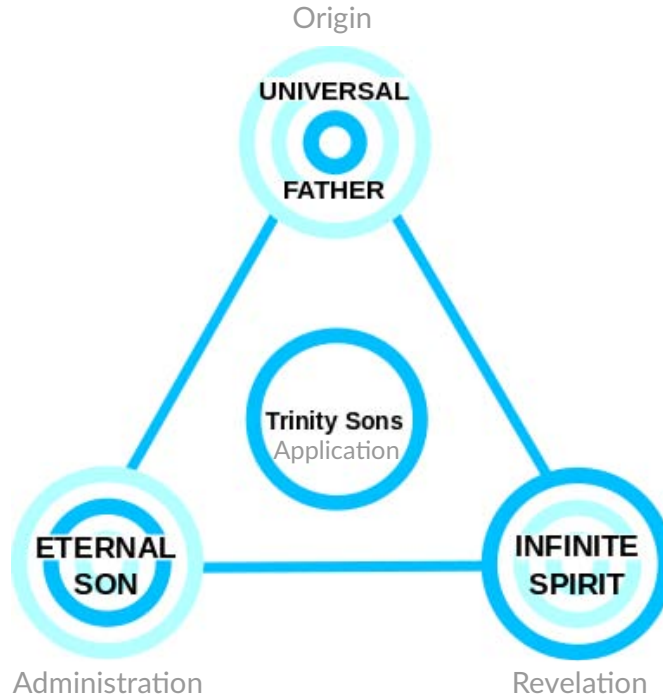

LAW

All law takes origin in the First Source and Center: He is law.

The administration of spiritual law inheres in the Second Source and Center.

The revelation of law, the promulgation and interpretation of the divine statutes, is the function of the Third Source and Center.

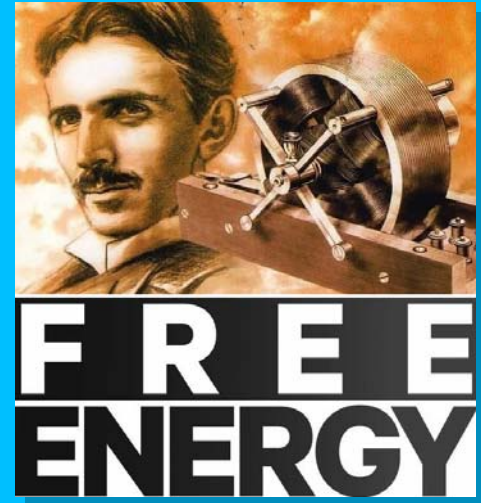

The application of law, justice, falls within the providence of the Paradise Trinity and is carried out by certain Sons of the Trinity.

ULTIMATONS

There are 4 commands, or modes of operation in regards to the Universal Father's Will as it applies to ultimatons in the universes of time and space. They are listed numerically simply for easier human understanding and are not necessarily identified that way by the Paradise Trinity.

- 1) Begin occupation of space.
- 2) Build matter.
- 3) Reset (a multifunctional command, two examples are A) to disintegrate matter and B) to prevent ultimatons from generating energy).
- 4) End occupation of space (and return to Paradise).

On Urantia, Father's Will is that we do not have access to ultimatonic energy at this time in our problematic history. This is done by issuing a thought bubble around Urantia containing command 3B.

ULTIMATONS

Father's Will is applied to ultimatons through what can be described as thought bubbles. These thought bubbles can be of any size and exist in three dimensional space. Each thought bubble can contain only one of the four commands of Father's Will at any given moment but the command can be changed when required.

These thought bubbles cannot be larger in size than the collection of ultimatons they control, but there can be smaller thought bubbles within bigger ones. In other words thought bubbles can be nested like Russian dolls when necessary. For example, let's say that long ago it was Father's Will that ultimatons be used to create matter suitable for the creation of the local universe of Neadon.

A single thought bubble the size of this planned local universe (at the time) could contain the command to begin populating that area of space with ultimatons. Once sufficient ultimatons had populated that region of space, the command would have been switched to build matter.

Now let's assume at some later point in time that a particular problematic space body in Neadon needed to be destroyed by the Paradise Trinity. A smaller thought bubble could be created to surround that space body and contain the Reset command to disintegrate the problematic object.

Defective ultimatons can (individually) be issued the command to return to Paradise.

BODY - MIND - SPIRIT

Mortal man has at its core, a spirit nucleus; mind is a personal energy system surrounding the divine spirit nucleus and functions in liaison with the material environment. [UB 12:9] Mind is always dominant over matter and is an indispensable channel of communication between matter and spirit. In relation to personality, the physical is subordinate, the mind co-ordinate, and the spirit is directive. [UB 116: 6]

ENERGY is the domain of the eternal Isle of Paradise.

SPIRIT is the domain of the Eternal Son (associate creator of all).

MIND is the domain of the Infinite Spirit.

PERSONALITY is the domain of the Universal Father.

To build character is to overcome the vicissitudes of time and circumstance in your life, to rise above the difficulties and not to succumb to the easy answers that your culture would provide for you. Growth in character is not synonymous with the growth of your spirituality, but it is definitely synonymous with the growth of your soul.

Spiritual progress is measured by the degree to which the human mind has established a connection with the soul that knows God. This is why spiritual achievement is sometimes referred to as “how close one has come to finding the Father”. This can be achieved by being flexible in your beliefs, and by adopting the attitude of a true scientist in attempting to find the Father within yourself.

SENSES

As mortals we have five senses. We can see things. We can hear, we can smell, taste and we can touch. If we want to go beyond that to the so-called sixth sense, this can grow to be quite a number of things, but we need soul growth to have soul felt experiences. We are making some movements towards finding out information beyond the five senses. We have built machines for taking Kirlian-like images “the aura machine” and even a lie detector.

It is in the Morontia realm where we will discover a great number of additional senses. Mostly these deal with the feelings of others. We will still have our human senses although in time the sense of taste may become redundant. However, once settled and grounded in a morontia body, you will have a faster moving mind, capable of perceiving well beyond mortal senses.

It is in the spiritual realm where you can find total understanding. You will learn to be able to sense other's emotions with great clarity, with great accuracy and what will happen there, is that you will have many more senses.

You will have a far greater mind and you will be able to take in more and more information, faster and faster.

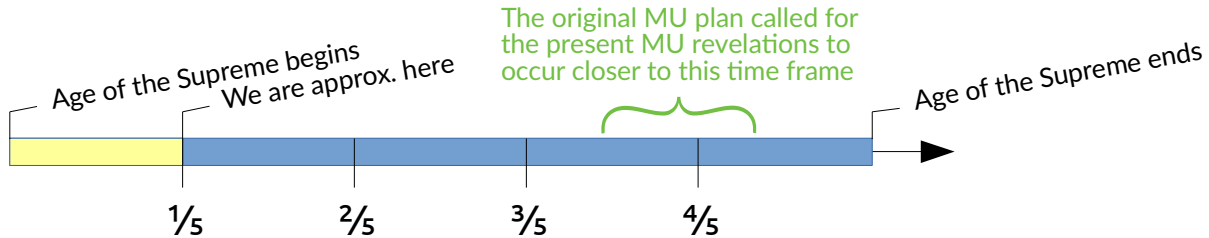

On the Mansion Worlds and on every inhabited planet beyond Mansonia you will be gifted with additional senses. Almost all these new senses will be what you might presently see as psychic senses – an ability to feel what others feel – a capacity to discern another's wishes or a knack for simply knowing the truth.

THE AGE OF THE SUPREME

We are currently about $\frac{1}{5}$ -th through this age according to the plans of the Architects of the Master Universe. Because of the abundance of rebellion that has occurred in Nebadon as well as our Creator Son's strong determination, abundant mercy, and the extreme and unique circumstances surrounding Urantia,

including the unprecedented direct intervention by the Architect of Superuniverse #7 Orvonton into the affairs of Urantia. This planet as well as all of the local universe of Nebadon now finds itself in the favorable position of being well ahead of the projected plan as indicated by the timeline below.

As well as being ahead of schedule in its preparations for becoming the gateway to the Outer Space Zones, Nebadon also provides a rich environment for accelerating the release of revelation regarding the great plan for the Master Universe and beyond.

SUPREME TIME

Supreme time is linear, flowing in one direction, existing only in the present. The past and future are inaccessible. It can only react to the past or anticipate the future.

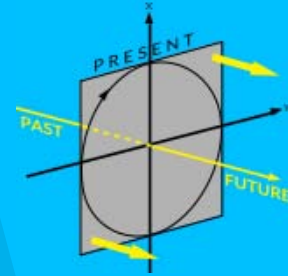

Pockets of Supreme time can be compressed in the present on the time line thus giving the perception of time moving faster for those on the time line. Beings on the time line are stationary time wise. We do not move through time, time moves through us.

Time compression is a characteristic of the Mother Spirits of the Local Universes and is often used by their offspring such a Seraphim in order to reduce the apparent time needed for lengthy space travel. When Seraphim compress time it is as if they are in a time bubble in which time passes normally for them but external observers perceive them

in an accelerated time mode. See the Urantia Book Part 4 the account of the water being turned into wine at the wedding through the use of time compression.

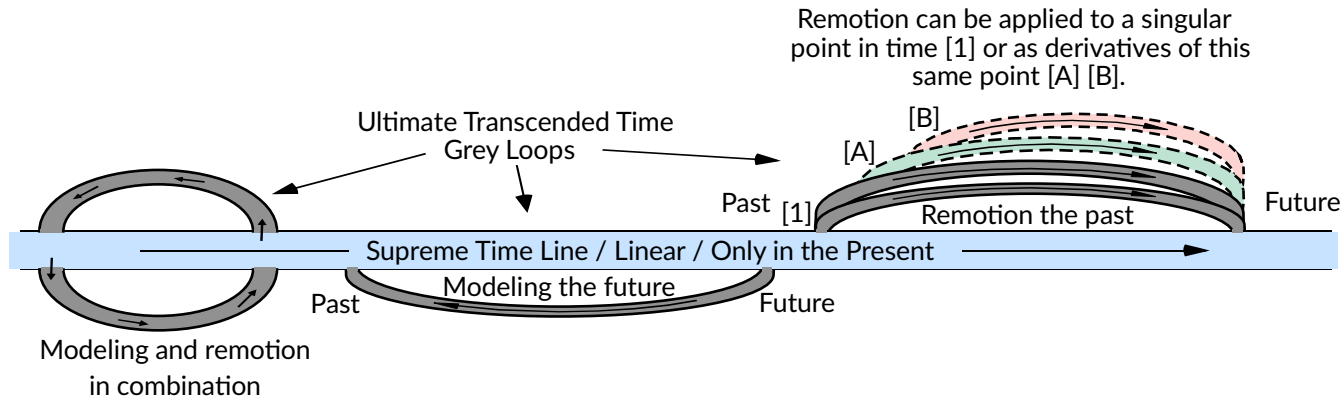

The Mansion world nearest Urantia is over 11 light years away. Transport Seraphim can travel about 3 times the speed of light, therefore it would take them almost 4 years to reach it, yet we know that the resurrection can take place there 3 days after mortal death, and Seraphim arrive there from Urantia even sooner than that. This is accomplished through time compression and other celestial shortcuts.

Time compression is also used to compress data transmissions for higher data transmission volumes over universe circuits. Hitoshi Kitada provides mathematical proof of time compression at: <http://www.kitada.com>

ULTIMATE TIME

How Ultimate time works: The absonite (absolute + finite) nature of Ultimacy can transcend linear time in a variety of limited (sub-absolute) ways which can manipulate and inject variations into the time line. The concepts and values of the past can be revisited and remotioned (reconditioned, enhanced, removed) in the present, and future possibilities can be explored and modeled in the present before the linear time line actually reaches them.

REMOTION

What is remotion in practical terms?

Man is made in the image of God, and so is the Master Universe. Yet they hardly resemble each other in appearance. Why?

God is Spirit. Man and the universe are primarily material. God reveals Himself through the mysteries embodied in various physical manifestations, man and universe alike. Spirit cannot be seen by the physical. One must learn to discern it with the mind and develop spiritual vision.

The seven Superuniverses are the arena of the Supreme Deity and exhibit motion through the process of evolution and linear time as their primary growth feature.

The 4 Outer Space Zones (OSZ) are the arena of the Ultimate Deity and exhibit remotion and transcendental time as a correction method for all evolutionary failures and shortcomings of Master Universe significance based on the universal law of cure (see MASTER CONCEPTS slide) which states that all growth and healing comes from the head (God) moving downward (to the lowest creatures). From the inside (Paradise) moving outward to the extremities (superuniverses and outer space zones), and in the reverse order that the problems first occurred.

This last part is where when and how remotion is performed on a universal scale.

REMOTION

As it is with man, so it is with the universe.

This universal law as it applies to man functions in four levels: Acute, Subacute, Chronic, and Degenerative, as reversible patterns of disease and health.

Likewise this law applies to the Master Universe in four levels as Outer Space Zones 1, 2, 3, and 4, as reversible patterns of evolutionary failures to be turned into successes.

Therefore, the first OSZ will be used to correct the most recent and deepest problems of Master Universe significance that will remain outstanding once the age of the Supreme has been concluded. In human physiological terms this can be described as the degenerative stage.

The second OSZ will be used to correct the next layer of less deeply rooted issues, known in physiological terms as the chronic stage. The first and second OSZ are closely related since the problems they deal with became deeply entrenched and as such remain relatively difficult to correct.

The third OSZ begins to deal with less deeply entrenched problems as the first two layers of issues have been peeled away and rectified in the first and second OSZs. In physiological terms this third level can be described as the subacute symptoms.

REMOTION

The fourth OSZ will deal with the easiest problems of universe importance once everything else has been cleared in the first three zones, and will perform the final rectification, cleansing and rebuilding which in physiological terms can be described as treating the acute stage which ultimately triggers the desired end result of the final and absolute healing crisis which brings about the desired final healing and completion of the Master Universe.

Notice that the fourth OSZ incorporates two aspects of the universal law of healing:

- 1) treatment of the last remnants of symptoms, and
- 2) the final healing crisis and completed healing transformation.

How will these two processes actually be worked out in the fourth OSZ?

The diagram - **The Destiny of the Master Universe** - gives us the basic mechanism that will be used. The bulk of the fourth OSZ will be used to carry out the final corrective and transcending work of remotion, while the special quatrain galaxies will be used to carry out the final healing and transformation of all outstanding evolutionary issues, and absolutum galaxies will be used to contain the end result of the Master Universe healing process so it can be presented to the Absolute.

ANALOGIES

In this example the **Deity Supreme** (superuniverses) is the gardener, and the **Deity Ultimate** (outer space zones) is the cook.

Central universe = the source of the seeds (patterns).

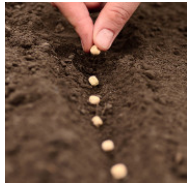

Superuniverses = the garden where seeds are planted and grow into vegetables and are harvested.

OSZ 1 = the kitchen where the veggies are processed: cleaned, trimmed, peeled, and cut.

OSZ 2 = the kitchen where the veggies are seasoned, cooked and prepared for consumption.

OSZ 3 = the kitchen where the prepared veggies are organized into individual meals.

OSZ 4 = the dining room where the meals are gathered and served as a feast.

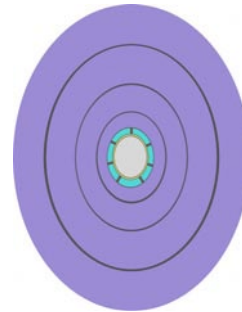

+

+

=

ANALOGIES continued

The finished meals are served at the fully adorned banquet table, where the carrots are both eaten as part of the meal, and enjoyed as part of the beautiful decorations.

So the lesson in this analogy is how a single ripe vegetable, a single ripe concept of the Supreme, is processed in stages by the Ultimate to produce a finished product for the Absolute.

Let's follow the process by using the humble carrot as an example.

The carrot seeds are planted and grown and then harvested.

The harvested carrots are then cleaned, tops cut off, peeled, then cut into large pieces for baking, cut into thick slices for boiling, diced for soup, cut into thin slices for garnish, shredded for making carrot salad, and julienned for making mixed salad. Some carrots are set aside for making a decorative center piece for the banquet table. The processed carrots are then used for making various dishes.

ANALOGIES

If Creation were an automobile it would be something like this:

Engine = Father - First Source and Center

Clutch = Architects of the Master Universe

Brake = Paradise Trinity

Throttle = Infinite Spirit - Third Source and Center

Body = Eternal Son - Second Source and Center

Carriage and frame = Unqualified Absolute

Steering = Paradise Trinity + God the Sevenfold + Deity

Fuel = LOVE - DESIRE TO DO GOOD

Complete automobile = I AM

I AM A DEUSY!

SUPREME SPIRIT VALUES

What are **Supreme Spirit Values (SSVs)**?

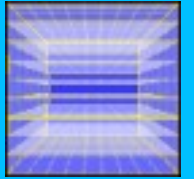

“New potentials were actualized in the universe of Nebadon consequent upon the terminal bestowal of Michael, and one of these was the new illumination of the path of eternity that leads to the Father of all, and which can be traversed even by the mortals of material flesh and blood in the initial life on the planets of space.” UB 101:6.17.

Jesus provided living examples of all 1,000 Supreme Spirit Values through his Life and Teachings which laid the foundation for the Direct Ascension School. The KJV Bible contains 585 and the Urantia Book has all 1,000 SSVs.

On Urantia, ALL 1,000 SSVs are now open for capture.

On Paradise the 1,000 SSVs form a 10 x 10 x 10 Supreme Cube where each LIVING Point of Light is held by a Paradise Son of God.

From the start it was Michael of Nebadon’s plan to design a Direct Ascension School where finite-mortals can attain an experiential realization of the Father’s perfect personality without ever leaving Urantia. By laying down the template for all 1,000 Supreme Spirit Values during His life in-the-flesh he opened the gates to ascension through the capture of these values.

SUPREME SPIRIT VALUES

SSV capture can be expressed mathematically, but unlike engineering and physics which require applied mathematics in a closed and static environment, each captured value is based on a subset of unique, actualized and applied experiences that represent a dynamic living formula. As the quantity of shared experience grows, so too does the quality resulting in a benefit to ALL as each higher grasp of these values presents another new revelation of the Father's perfect personality and truly explains why the **Truth is Alive!**

There is no greater honor than being one whose actualized living experience results in the direct elevation of the Supreme Being and, as such, an elevation for ALL.

Proverbs 4:23-27

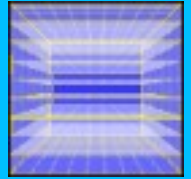

23 Above all else, guard your heart, for everything you do flows from it.

24 Keep your mouth free of perversity; keep corrupt talk far from your lips.

25 Let your eyes look straight ahead; fix your gaze directly before you.

26 Give careful thought to the paths for your feet and be steadfast in all your ways.

27 Do not turn to the right or the left; keep your foot from evil.

SUPREME SPIRIT VALUES

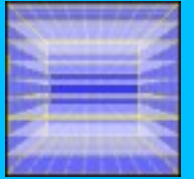

1) Recently, the "First Level of Coherence" was achieved between the Supreme Mind and the Cosmic Mind allowing God the Supreme in Havona to become functionally active in ways that were previously unavailable.

2) These 1,000 SSVs are captured through actualized living experience. SSVs "impinge" on each other, so they are "clustered" together in groups because they are either related, they build on each other or they have an influence on like-types of values.

3) Above the 7 Adjutant Mind Spirits of the Local Universe Mother Spirit there are another 52 Adjutant Spirits that facilitate SSV capture. While the Adjutants are not personalities, they are personal.

They are individual, segmented mind circuits of Deity personality. Each one of the 52 Adjutants is the acting facilitator for specific SSVs. More than one Adjutant is often involved in SSV capture because of this impingement. Quite often many Adjutants are involved in the capture process. As subsets of the SSVs, many individual experiences also "impinge" on each other. Simply stated, they "overlap". This overlapping of individual experiential neural pathways strengthens the coherence within individual SSVs and between "clusters" of SSVs.

4) The overlapping experiential neural pathways interconnect these "Points of LIGHT" like a massive spiderweb-like superhighway of inter-associative thought.

SUPREME SPIRIT VALUES

THE SUPREME UNIFIER

The Supreme Being has a threefold function in the experience of mortal man: First, he is the unifier of time-space divinity, God the Sevenfold; second, he is the maximum of Deity which finite creatures can comprehend; third, he is mortal man's only avenue of approach to the transcendental experience of consorting with absonite mind, eternal spirit, and Paradise personality.

To finite man truth, beauty, and goodness embrace the full revelation of divinity reality. As this love-comprehension of Deity finds spiritual expression in the lives of God-knowing mortals, there are yielded the fruits of divinity: intellectual peace, social progress, moral satisfaction, spiritual joy, and cosmic wisdom.

It's extremely important to note that Jesus set the SUPREME standard for attaining all 1,000 SSVs. It should also be noted that there are 7 progressive attainment levels for each SSV and these 7 levels are loosely described in the side bar.

THE SUPREME SPIRIT OF TRUTH

The augmented Supreme Spirit of Truth stands side-by-side with the original. It doesn't supplant it, but blends or melds into mind allowing for Mota-like insight that leads to wisdom and a clear view of Spirit Value derived from an individual's actualized living experience. This will allow an individual the opportunity to capture all Supreme Spirit Values while still in-the-flesh opening the door for an entirely new type of ascension.

THE 7 SSV LEVELS

Supreme

Outstanding

Excellent

Very good

Good

Fair

Poor

SUPREME SPIRIT VALUES

The augmented Supreme Spirit of Truth is Trinitarian in nature and it allows recipients access to the recently achieved "First Level of Coherence" within the Supreme Mind. This fosters easier Spirit Value reconciliation between an individual's actualized living experience within their developing Morontia Mind and that which exists within the full, seven-phased Cosmic Mind of the Master Spirits.

The augmented Supreme Spirit of Truth is analogous to Morontia Mota for the Material Mind and can first be accessed on its lower levels with the attainment of the Third Psychic Circle. The Comforter (the original Spirit of Truth) remains in place for those in Psychic Circles 4 thru 7 as a supplement to the Adjutant Mind Spirits

just like before, while the new Spirit of Truth can be accessed beginning with Psychic Circle 3 (Refer to: Urantia Book: 110:6.1).

The augmented Supreme SoT is an SSV operating system that now has both the depth and breadth for ascenders to assess their progress and make a direct climb to the highest attainable height, but none of this would be possible had Jesus not given each SSV its original full definition.

The Spirit of Truth is under full command of Mother Spirit, in that Michael of Nebadon has placed it with Mother Spirit so that it is constant and not moving beyond her immediate direction.
